Skinner Filtration Plant Oxidation Retrofit Program	Construction of a new 120- million gallon per day (mgd) treatment module at Plant 2 and a 630-mgd oxidation retrofit program to augment the plant's disinfection capabilities.	Tucalota Creek and Unnamed Tributaries	Streambed (P): 0.08 Streambed (T): 0.11 Wetland (P): 0.14 Wetland (T): 0.05	Permanent impacts will be mitigated by the on-site creation of 0.26 acre of wetland and the on-site enhancement of 0.22 acre of Tucalota Creek. Temporary impact areas will be restored.	Conditional

1. Wetland refers to vegetated waters of the U.S. and streambed refers to unvegetated waters of the U.S. (P) = permanent impacts. (T) = temporary impacts.

2. Low impact certification is issued to projects that have minimal potential to adversely impact water quality. Conditional certification is issued to projects that have the potential to adversely impact water quality, but by complying with technical conditions, will have minimal impacts. Denials are issued when the projects will adversely impact water quality and suitable mitigation measures are not proposed or possible. Time expired refers to projects that may proceed due to the lack of an action by the Regional Board within specified regulatory timelines. Withdrawn refers to projects that the applicant or Regional Board have withdrawn due to procedural problems that have not been corrected within one year.
